- Waterproofs and seals grout and tile.
- Works on cement, slate and porous tile.
- Prevents staining or soap scum buildup.
- For interior or exterior use.

SAVOGRAN

Grout Sealer

Description

Provides water repellence and protects against staining on grout, cement and porous tile. Helps prevent soap scum buildup on glazed ceramic tile.

Application

Use on all interior or exterior porous and glazed tile, grout, cement, slate, etc. One gallon of sealer covers approximately 400 square feet of surface area.

Directions

BEFORE USE, read all information on container. Protect eyes with goggles and wear rubber gloves. Surface preparation: tile grout should be cured for a minimum of seven days and all surfaces must be sound and free of all contaminants which will prevent sealer from penetrating. Surface temperature should be above 50°F before application.

Application: sealer may be applied with a brush, sprayer or sponge. Apply a thin coat, prevent puddling or over-spray. Two coats is generally adequate for grout. Second coat can be applied at any time after first coat has dried (usually after one hour).

Clean up: clean tools with soap and water.

Important label information

Contains water, silicone emulsion. AVOID eye contact and prolonged and repeated skin contact. Wash thoroughly after handling.
